PANOGEN

The modern Liquid Seed Disinfectant
FOR CONTROL OF
SMUT, BLIGHT, ROOT ROT, SEED DECAY
and other Seed-borne Diseases of
Wheat - Barley - Oats - Flax - Rye

Panogen can be applied at the time and place of cleaning,
and at any season of the year — even at temperatures con-
siderably below freezing.
Panogen never interferes with the even flow of seed
through the drill... there is no flying mercurial dust
while planting... and Panogen makes germination more
certain because it sticks rigidly to the seed after planting

Leslie H. Saunders Mourned in Passing

Leslie Herbert Saunders, 52, a long-time resident of the Carbon district, died in the Colonel Belcher hospital, Calgary, on Sunday, April 1. Funeral services were conducted from Carbon United Church Wednesday, April 4, with Rev. Malcolm Galbraith of Rockyford officiating. Jacques Funeral Home was in charge of arrangements and interment was made in Carbon cemetery. Pallbearers were Ed Hatcher, Leo Brown, Sam Garrett, Charles Nash, Archie McLeod and Jim Nielson.

Born in Cove Head, P.E.I., he moved to Ghost Pine, Alta., in 1905. He served with the 137th Battalion from 1916 to 1918, and after receiving his discharge lived in Calgary for a year before moving to the Carbon district, where he had since resided.

Surviving are his wife, Doris; a son, Murray; and a daughter, Shirley, all of Carbon; his father and step-mother, Mr. and Mrs. George Saunders of Bowness; two sisters, Mrs. T. W. Neeland, Calgary and Mrs. Harold Powell of Victoria; a brother, William A. in Calgary, a step-brother, George of Bowness; and a step-sister, Mrs. Don Bennett of Vancouver.

F.U.A. Local to Sponsor Junior Grain Club

At its April meeting the Carbon Local of the F.U.A. decided to sponsor the Junior Grain Club and its members will be invited to attend the regular F.U.A. meeting in June. The Local members will assist the juniors in meeting procedure and practical farm problems.

The meeting discussed plans to assist Jim Bushby rebuild his home, recently destroyed by fire. A list has been placed in the Builders' Hardware and volunteers are requested to register there. When work is started each man will be asked to work on specific days to avoid the possibility of too many or too few men on hand at one time. Each volunteer will be asked to work for three days. Help your neighbor — you may need help next.

The village council will be approached with a view to having large trucks barred from parking on the main street of Carbon between the village office and the C.H. Nash store.

Plans are being made for a farmers picnic on June 8. John Wood, Hugh Isaac and Emelio Grenier were named to the picnic committee.

The regular reporter was "drowned out" and unable to attend.—Contributed

Socony-Entice No. 1 Wednesday was drilling at a depth of 5647 feet in the Madison lime. Coring and testing in the upper Madison last week showed a recovery of 60 feet of oil cut mud in one test. Drilling is continuing to the Devonian formation.

Precipitation Over Prairies Reported Good

Winter Snowfall In Alberta And Saskatchewan Well Above Average

(By The Canadian Press)

Better-than-average precipitation over the prairie grain belt during fall and winter months provides an optimistic note for talk about crop prospects among western farmers.

Statistics prepared by the meteorological division of the department of transport for the seven-month period ending Feb. 28 show that over-all moisture conditions are above normal in two of the prairie provinces. Alberta's average increase over normal amounted to 15 per cent., in Saskatchewan it was 12 per cent. while Manitoba showed a deficiency of one per cent.

Heavy snowstorms in mid-March blanketed many western districts boosting grain-growers' hopes another notch.

Southern Alberta made the best showing in the seven-month period with a 36 per cent. increase over normal. Southeastern Saskatchewan was next in line with an excess of 19 per cent. Only two areas—eastern Manitoba and central Alberta—recorded deficiencies and they were slight.

August rainfall was below normal in most areas with deficiencies ranging from 20 to 30 per cent. in northern Saskatchewan, southern Alberta and eastern Manitoba. Northern

WHODUNIT?—Frank Cowgill, a chicken and turkey fancier of Michigan City, Indiana, is shown comparing a normal-sized hen's egg with the giant sixteen-inch in circumference egg laid by a Rhode Island red hen owned by poultry farmer William Schlinker. The farmer is sending the egg to Purdue University for a check, and told newsmen, "the heck of it is I don't know which of my many hens laid it." This is believed to be the largest egg in poultry history.—Central Press Canadian.

Alberta, southwestern Saskatchewan and western Manitoba records were on the right side of the ledger.

All sections were short on rainfall in September except in eastern Manitoba where moisture was reported 35 per cent. above average. Central Alberta registered a deficiency of 70 per cent. and the loss ranged from 40 to 55 per cent. in northern and southern Alberta and northern and southwestern Saskatchewan.

Rain and snow in October and November changed the picture. Virtually all sections reported heavy precipitation with twice the normal amount registered in southern Alberta in both months. Excesses of 100 per cent. over normal occurred in October in northern Saskatchewan and in northern Alberta during November.

Winter snowfall for December, January and February was well above average in Alberta and Saskatchewan. It was about normal in western Manitoba, but the eastern part of the province showed a deficiency of 25 per cent.

ARE DANGEROUS

Discard your cracked cups, dishes and drinking glasses. They cannot be properly sterilized.

Funny and Otherwise

"Are you staying in that boarding house again this year?" "No fear! I don't believe in being stung in the same place twice!"

Speaking of super salesmanship here's the story of the renting agent who was trying to interest a young couple in a basement apartment. He used all his arts to praise the place while trying to ignore the fact that water was trickling down the walls.

"Isn't it a bit damp here?" the young woman asked him.

"Damp?" exclaimed the agent. "Of course it's damp—but just think what an advantage that would be in case of fire!"

"Ladies and gentlemen," shouted a street performer, "in a few moments I will astonish you by eating coal, stones and nails. I will also swallow a sword, after which I will come round with the hat, trusting to get enough for a crust of bread."

"What!" came a voice from the crowd. "Still hungry?"

"Why must we be kind to the poor?"

"Because you never can tell, some of them might get rich."

The teacher was testing the knowledge of the kindergarten class. Slapping a half-dollar on the desk, she asked sharply, "What is that?" Instantly a voice from the back row cried, "Tails!"

A public library in suburban London has banned sleeping on chairs, tables or floors, riding bicycles inside the building or eating sandwiches while reading.

Things that begin at forty: Life, lumbago, bifocals, stomach disorders, and an inclination to tell the same old stories, over and over.

Beware Frosted Grain For Seed, Farmers Warned

Research Tests Show That Appearances Are Deceptive

OTTAWA.—The Canada department of agriculture makes a point of recommending prudence to farmers who are planning to use frosted grains as seeds. Research made in this connection indicates that appearances are deceptive and that, by itself, an eye test can be far wrong.

Germination tests on cereal grains taken from the frost area surrounding the Experimental Station at Scott, Sask., show that wheat, on the whole, will germinate satisfactorily. But this is not so true of oats and barley. Many samples of these two cereals had a germinative ability below 40 per cent. and only a few of 80 per cent., according to A. G. Kusch, cerealist at this station.

The extent to which germination has been impaired by frost cannot be determined visually. Wheat may appear to be damaged severely and yet give a good percentage germination and the reverse may be true. The germination of oats and barley may be seriously impaired while showing little external sign of frost damage.

Frost-damaged grains were also seeded in soil at Scott. In all cases, the percentage of plants emerging did not equal the laboratory per-

centage germination and the lower the percentage germination of the sample, the greater the discrepancy of plants emerging.

Furthermore, as the depth of seeding increased, the percentage of plants emerging decreased. An additional observation was that the lower the percentage germination of the sample, the more serious the failure of plants to emerge with increased depth of seeding.

In view of those findings, farmers are urged to make or have germination test made on frosted grain or grain coming from areas affected by frost. Where germination percentages are too low, it is advisable to purchase better seeds. In all cases where frost-affected grain is used, it is recommended to increase the rate of seeding in proportion to the decrease in germination. Finally, sow the grain as shallowly as it is possible in order to get the seed into moisture.

"Sands Of Arabian Desert Run Gold -- Not Cold"

SIDON, Lebanon. — Caravans of modern construction equipment and huge quantities of pipeline materials have edged steadily across the vast Arabian desert for the past three years.

In the face of colossal difficulties, the Trans-Arabian pipeline has crept westward from the Persian gulf and eastward from the Mediterranean sea to a long awaited junction and welding of the final sections.

Today that fabulous pipeline owned by U.S. refinery company, can deliver 300,000 barrels of the valuable black fluid daily to Sidon. From there it is moved by tankers to European refineries.

The long line called Tapline, cost \$225 million. It releases for service 62 huge tankers, and saves 3,200 miles of shipping around the tip of the Arabian peninsula. Tapline is 1,069 miles in length, including feeders.

With the western European economy even more oil-hungry now than in war days, easier access to the Middle East petroleum supplies through Tapline can aid materially in Europe's recovery.

How big is Tapline? Filling the long pipe for the initial transmission between Bahrain and Sidon required five million barrels, plus a two million-barrel reserve for the storage tanks here.

Much of the oil will go to refineries in Holland and France and Spain.

The route laid out for Tapline's eastern section traverses a land almost devoid of communications. It originates in the Abqaiq field and parallels the Persian gulf coast 42 miles to the Qatif field, where it turns westerly across the desert.

To supply the long operations a new port was set up at Ras el-Mish'ab, near the Buwait border. Out on the gulf an artificial island was built at a depth where shipping could dock. An aerial tramway was extended two and a half miles to shore. Over this passed more than 1,000 miles of pipe.

At the terminal in Sidon, the oil now is flowing through submerged pipes to waiting tankers. Thanks to the skill of veteran engineers, more European factories will be busy during coming years.

CZECH OFFICIAL FLEES HOME-
LAND — Interviewed by a reporter after his arrival in Liverpool, England, is former Czechoslovakian ambassador to India, Dr. B. G. Kratochvil. The latter fled to England after writing a letter of resignation to his government protesting manner in which the people of his country are being exploited.

Seed Act Protects Buyer

Present and future production of seed is tied up with the seed used today. Seed contaminated with weed seeds will increase cost of production and may lessen for years to come, the crop yield of the land on which it is sown. Seed of a variety not adapted to the area, or not suited for the purpose for which it is grown, or seed with a low percentage of germination generally involves loss.

For these reasons the sale of home-grown and imported seed for seeding in Canada is subject to the provisions of the Seeds Act which requires that all seed offered for sale should be tested and labelled with the seed grade. This grade is based on purity, germination and general quality, and new varieties must be licensed before being offered for sale.

The object of the Seeds Act is to enable purchasers to secure seed of known and suitable quality, to prevent misrepresentation and deception in advertising and sale of seed, to restrict the distribution of weed seeds and to prevent the importation and sale of seed which is unsuitable either as to quality or variety.

Because genetic purity is the main indicator of the value of seed stocks, provision is also made for regulating the multiplication and grading of breeding stocks of improved varieties through registered and certified seed. Registered and certified grades apply only to seed of recorded pedigree, which has been tested as to variety, inspected, graded and sealed in the container by an inspector of the Plant Products Division, Department of Agriculture, Ottawa.

The overall purpose of the Act is to insure that seed offered for sale is correctly graded and properly labelled as well as to promote the production and the use of improved seed stocks.

Motorist Talks Cop Into Giving Self A Ticket

MIAMI, Fla. — A red-faced traffic officer, Lewis J. Branning, explained how a tongue-wagging motorist talked his way out of a fine.

While Branning was writing a ticket, the motorist kept up a steady stream of chatter. It was so disconcerting that Branning wrote his own name instead of that of the offender on the ticket.

The mistake was discovered in the traffic fines bureau. Branning can't remember the name of the motorist.

Eye Dropper Feeding

Dr. Donald Schmidt, veterinarian at Chicago's Brookfield zoo, uses an eye dropper to feed a several-days-old kangaroo. The tiny animal, about ten inches high, has been placed in a carton and is being kept in the offices of the zoo's administration building until it's big enough to care for itself.

ODDITIES IN THE NEWS

William Yee, one of the few Chinese laundrymen in Pittsburgh, went out of business.

This note posted on the door greeted Yee's customers:

"Very sorry. I am moving. Someone stole all the shirts. Came through the basement and stole all the merchandise. Stole Sat. or Sun."

And Yee left no forwarding address for his bewildered customers.

Morden, Man.—There's a policeman in Winnipeg who may still be a bit shaken by a recent experience. On traffic beat, he approached a farmer's truck stalled at a busy intersection. Already framing nasty epithets for the rural driver he thrust a mean jaw into the cab—and then let it drop a good six inches.

Comfortably and calmly ensconced beside the driver was a full-grown healthy porker—a pig, the patrolman learned, on the way to market.

A beauty contest was organized at Canvey Islands, Essex, England, for women over 65.

Mothers bringing baby carriages to football games at Wombell, a Yorkshire village, found a new dodge. When the carriages are parked on the edge of the field the babies are kept happy and quiet watching the linesmen run up and down the field.

A two-year-old boy lay playing in the centre of a railroad track at Ravenna, Italy, as a train passed over him. The horrified engineer saw the child, slammed on the brakes and leaped from the cab. Two cars back he found Ivano Berrini gurgling to himself as he clambored over the track between two wheels.

Uses Bee Venom For Arthritis

LONDON. — Mrs. Julia Owen, believed to be the only bee-venom specialist in Britain, keeps 2,000,000 bees which she uses to treat arthritis cases.

The bees, of a special type, are fed on a secret diet of honey and herb poisons, the formula of which was left to Mrs. Owen by her grandfather.

"Some of my patients are too ill to come to me," Mrs. Owen said, "so I take my bees to them. When I go on long journeys I sleep with the bees inside my nightdress to keep them warm."

Mrs. Owen tests the poison strength of each new batch of bees by stinging herself.

"It's not really painful," she said.

India Next Stop For School Teacher

PARIS.—Emily Hatch, 53-year-old American schoolmarm with itchy feet, is off on her 31st year of teaching, travelling and housekeeping all over the world.

Her next stop—India.

"Maybe I'll settle down there for the next 20 years or so," she said before she left. "I've got a lot to do."

Grey-haired Mrs. Hatch is taking over her husband's job as educational adviser to the Indian State of Delhi. Her husband, Dr. Spencer Hatch, is taking a similar job in Ceylon. Both assignments are part of the world-wide educational program of the United Nations Educational, Scientific and Cultural Organization.

Their two daughters, Nancy, 23, and Janie, 12, are tagging along with mother this time.

"I married and didn't settle down," said Mrs. Hatch with a twinkle. She and Dr. Hatch went to India on their honeymoon and they have been globe-trotting since—Burma, Ceylon, Mexico and most recently, Costa Rica.

Her home for the last 30 years has been a hotel room, steamship cabin or native village hut.

In India, Mrs. Hatch will visit Delhi's 305 villages where some 125,000 illiterates must be taught.

She believes that people who travel should set themselves up to live "permanently" wherever they are.

"After all," she said, "life has its advantages everywhere. Why, just last year I bought T-bone steak in Costa Rica for only 16 cents a pound!"

GEMS OF THOUGHT

PRAYER

A prayer in its simplest definition is merely a wish turned God-ward.

—Phillips Brooks.

He who prays in Christ's name must pray Christ's prayer: "Not my will, but thine, be done."—Alexander Maclaren.

Are we benefited by praying? Yes, the desire which goes forth hungering after righteousness is blessed of our Father, and it does not return unto us void.—Mary Baker Eddy.

In prayer it is better to have a heart without words, than words without a heart.—Bunyan.

Let not him who prays, suffer his tongue to outstrip his heart; nor presume to carry a message to the throne of grace, while that stays behind.—South.

Today is yesterday's pupil.

On The Side : By E. V. Durling

Musically Inclined

Everybody should know how to handle at least one musical instrument. Not particularly for entertainment purposes, but for their own good. Playing a musical instrument is an aid in achieving that type of mental attitude beneficial to the general health. That is a claim frequently advanced by eminent medical men. It has long been my desire to follow this advice, but I cannot settle on an instrument. I have given thought to the bagpipe. I figured this would serve a double purpose. It would give me an instrument to play and besides, when the fellow next door kept up his loud radio playing until 2 a.m., I could come back at him with a few blasts on my bagpipes.

Tip For Female Sex

Young women invited to dine with business executives or professional men of importance often make the mistake of trying to be too interesting from a conversational standpoint. Hard-working men do not, as a rule, demand that their dining and dancing partners be conversationally interesting. They like them to be restful. A man who has been struggling with important matters all day wants to give his mind a rest at night. He is attracted and entertained by trivial matters and doesn't want to be involved in any discussions as to that thing called "the situation".

Curtain Calls

What has been the extent of your career as a first-nighter? Or, for that matter, as a theatre-goer in general? What is the largest number of curtain calls you ever saw a star or a company get? In Hamburg, Germany, recently a company presenting a ballet version of "Faust" received 42 curtain calls at the conclusion of the performance. In this version of "Faust" the devil is portrayed as a woman.

Revenge Is Sweet

If you have a secretary, how long has she been with you? If it has been at least five years, she probably knows as much about you as your wife does. Maybe more. Do you think there is any chance of your charming amanuensis writing her autobiography? Is there a possibility of her turning out a book titled "My Days with My Boss"? If so, let us hope she will be discreet and not like Blanche Patch, George Bernard Shaw's secretary for thirty years, who wrote a revealing book titled "Thirty Years with G. B. S.", in which she does not pull her punches. Some of her revelations do not give Mr. Shaw any the best of it.

This deal, from the match between Britain and Italy in the 1950 European Championships, is a classic example of natural versus artificial bidding. The British South opened One Diamond and North's hand was ideal for a direct Three No-Trumps. South now bid Four Clubs and North jumped to Five Diamonds, having four trumps and excellent controls. South took the tip and bid, and made, Six Diamonds.

The Italian South also opened One Diamond, an artificial forcing bid that does not show a Diamond suit. North's response of "Two Clubs is part of a step system to show the number of honour tricks held, and South had to make the absurd rebid of two No-Trumps to indicate that his forcing opening was a minimum. North raised to Three and all passed.

Export Of 224 Shorthorns To Canada

The total number of Scotch Shorthorns exported from January 1 to December 31, 1950, was 483. This was the highest number for the past 19 years, and far exceeds the number of any other breed of cattle from Britain.

They went to the following countries: Canada, 224; Argentina, 73; Australia, 45; Brazil, 2; New Zealand, 2; South Africa, 5; Southern Rhodesia, 3; Uruguay, 5; and the United States, 124.

CHURCH SERVICE AT WESTMINSTER — King George and Queen Elizabeth, accompanied by Princess Margaret, are shown leaving Westminster Abbey after attending pre-Easter service. All members of the Royal family adhered to the custom of carrying bouquets.

WON "MEDAL OF MERIT" FOR SERVICES WELL RENDERED —

By virtue of her milk production for past 305 days, which had enough butterfat content to make roughly 1,000 pounds of butter, three-year-old "Brampton Belle Beacon" has been awarded the Canadian butterfat production championship by Canadian Jersey Cattle club. Owned by Don Head Farms at Richmond Hill, Ont., the prize Jersey cow—grand champion at Canadian National Exhibition and reserve grand champion at the Royal Winter Fair last year—has not only won awards for production, but for perfection so far as her "type" of animal is concerned. Famous animal is seen above with F. Redelmier, (left), and W. Redelmier, proprietor of farms.—Central Press Canadian.

HE ALMOST MADE IT! — Over Easter weekend 2,000 immigrants, destined for all parts of Canada, arrived in Halifax, bringing to total of 3,000 men, women, children of every race and tongue in Europe who have arrived in city in less than a week. Youngest passenger aboard Dutch ship Volendam was Hans Strien, born to Mr. and Mrs. John Strien on March 24. Father was disappointed birth didn't occur ashore, as child would then have been a Canadian citizen.—Central Press Canadian.

—Central Press Canadian.

DUTCH AIR POWER IN ACTION

Their majesties, Queen Juliana and Prince Bernhard of Holland are seen peering skywards as they watched a flight of Meteor Gloster jet planes pass overhead during manoeuvres held recently at Velewe. The rulers also inspected new war materials which were presented to the Netherlands by the Canadian government.

—Central Press Canadian.

INDICTED IN CUBA — Twice president of Cuba, Ramon Grau San Martin, (seen above), has been indicted with ten of his close followers for the alleged misappropriation of more than \$40,000,000. The former official was ordered to post bail for that full amount by Judge Frederico Justiniani, who has been investigating the charges that Grau's regime mishandled more than \$174,000,000 in Cuban government funds.

—Central Press Canadian.

INVITES TOURISTS TO VISIT CANADA — Attractive Jean Sitarski, Miss Ontario Civil Service, on her first visit to New York invites her U.S. friends to return the visit and see Canada. Jean wears the uniform of the official receptionists at the many information centres operated at border points by the Ontario Department of Travel and Publicity.

FRENCH PRESIDENT TO VISIT U.S. — President Vincent Auriol of France is seen here with his two grandsons, Jean Paul, at left, and Jean Claude, as they scanned the globe in the president's office at the Elysee Palace in Paris prior to "grandpa's" departure to U.S. on March 20th aboard Ile de France. Auriol and his wife will be the guests of President Truman in U.S.—Central Press Canadian.

"A SURE CURE" — Frank Florsek, head keeper at the zoo's ape house in St. Louis, Mo., is seen with gun in hand as he takes his turn at the 24-hour "B-B" gun watch over Phil, the gorilla. Phil, a victim of a very sore heel, which has been treated with some medication, wouldn't give it a chance to heal because he continuously scratched the affliction. So now every time the gorilla tries to sneak in a scratch he gets peppered with "B-B" shot.—Central Press Canadian.

BANK ROBBERS LEAVE SOUVENIR — A score of persons in the bank at Port Colborne, Ont., were ordered at gunpoint by three thugs to lie on the floor while they emptied cash drawers of \$6,800. Rougher tactics were used on Township Clerk Mackenzie Rutherford, who was slugged over the head with a pistol butt when he tried to leave the bank. His daughter, here, applies bandages to the cut in his scalp caused by the blow. The bandits escaped in a stolen car.—Central Press Canadian.

A knowledge of first aid procedure will be invaluable in case of war, Air Vice-Marshal G. R. Howsam, Provincial Civil Defence Co-ordinator, said in the last of a series of public

He told how citizens could help Alberta's civil defence organization by learning how to protect themselves and their families, and by serving in a civil defence job.

"Your civil defence committee will soon be calling for volunteers for the various positions. Think it over now and be ready to decide on the job you will be able to do your best work in. Civil defence workers are ordinary people whose daily life has equipped them to fit into a special place in the civil defence organization."

He suggested that service clubs, church auxiliaries, study groups and community leagues take accredited St. John's Ambulance Association courses as

soon as possible as most civil defence workers would be required to have some first aid training.

Air Marshal Howsam said auxiliary fire fighters, policemen and first aid workers were needed urgently. Rescue crews also would be required and special crews would be trained to use Geiger counters to detect and measure radioactivity.

Evacuation centres would have to be provided for people evacuated from bombed homes. A knowledge of feeding large numbers of people and caring for children would be useful to those serving in evacuation centres.

Many civil defence jobs can be filled by women, the co-ordinator said.

*When you
add it all up...*

WHEN you consider the men, women and money needed to operate 3,700 branches — you see what is involved in looking after the greatly increased demands made by busy Canadians upon their chartered banks.

In ten years . . . with bigger staffs and higher wages, payrolls have jumped from \$40 million a year to \$102 million

. . . taxes, federal, provincial and municipal, have risen from \$9.5 million to \$20.7 million a year

. . . interest paid to depositors has increased from \$22 million to \$57.8 million a year.

And these are only three of *many* expense items. Yes, today more than ever, it costs money to run a bank.

The Sage Across the Centuries

By Sister M. Rosalita

Editor's note: Sister M. Rosalita is Professor of English and Ancient History in Marygrove University, Detroit, which is one of the largest ladies school of learning in U.S.A.

"JOHN, do you think you can make a living over in Canada for your big family?"

"We are going to make more than a living, Calvin; we are going to make a life."

For such a reply, the true philosopher of any age would have taken John Miner to his heart forever. His famous son was a philosopher "by descent" as well as in his own right.

This snatch of conversation which has survived the years was John Miner's reply to a neighbor on a spring morning in 1878 when he with his family of ten were leaving his Ohio home for that southernmost peninsula of the Canadian Dominion which lies between Lake Erie and the Detroit River. The virgin forest where he settled gave no intimation of the future day when the spot would become the Mecca of naturalists and lovers of wild life. The freckle-faced, blue-eyed John Thomas at thirteen gave no hint that he would perpetuate the family name there in the greatest Migratory Bird Sanctuary on the North American Continent; that, for his life effort in

From childhood to his last breath, Jack Miner loved everything that God had made: bird, beast, flowers, and men. He learned the ways of plants and animals in the pathless woods, where, as he so beautifully expressed it, God "opens His book of knowledge" and "turns the leaves very slowly so that my dimmed eyes may read His meaning." Not only did he transmit his love for and knowledge of this creation to his own sons, but he left to posterity the benefit of his study, notably in his book "Jack Miner and the Birds".

Among the many interesting chapters of this nature book, one, entitled "Assisting Nature", sums up his philosophy. It was published originally in the Daily Globe in answer to articles in the press and personal letters decrying man's "interference with nature", and all carrying special pleading for "the preservation of nature's balance". He based his position squarely on the inspired Word of God as found in the record of creation in the Book of Genesis:

"And God created the great whales and every living and mov-

Left to right: Messrs. Arthur Allen, John R. MacNicol, M.P., co-founders of the National Wild Life Week, standing with Jack Miner on April 10, 1944, the last birthday Jack Miner spent on earth.

behalf of bird and animal conservation the United States would award him the precious Outdoor Life Gold Medal; that His Majesty, King George VI would bestow upon him the Order of the British Empire one of the highest honors within the royal power; that finally on April 18, 1947, the Canadian Parliament would pass the National Wild Life Week Act, which proclaims that annually the week of April 10, the anniversary of the birthday of Jack Miner, will be known as National Wild Life Week "as a national tribute to the man who did more than any other to create public interest in the value of Canadian Wild Life resources and consideration for their natural habitats." But all this was seventy years in the future.

John Miner, Senior, succeeded better than he knew in the twofold objective to which he set himself. In the face of hardships which are the concomitants of pioneering, and by the hard way, he proved he could make a living in Canada for his wife and children. As head of a Christian home in possession of the things that are beyond all price—a devoted wife and mother, a family of healthy, happy boys and girls—he fulfilled his promise to "make a life" for nearly sixty years.

Ted and John Thomas, "Uncle Jack" to all the world, the oldest boys, were early called upon to assist their father in providing for the large family. Of that home the younger of the two was to say in later life: "we were poor financially, but multimillionaires in harmony, love and appreciation." Remarks reminiscent of the pioneering spirit and of the vast stretches where flower and bird and beast abounded have remained in the Jack Miner record: "I took to the woods as naturally as a park hare;" "I was born, barefoot;" "I chopped out an existence and have grown up with the country."

Living the strenuous life together, and together enjoying their brief holidays of big game hunting, Ted and Jack grew to manhood. Stark tragedy broke this close bond on one such outing. The year that Jack was thirty-three, he, Ted, and a mutual friend went hunting in Northern Quebec. Through the accidental discharge of the latter's gun, Ted was killed instantly. For thirteen miles through a trackless forest Jack carried his beloved Ted to an open boat; then rowing for twelve miles against a blinding snowstorm, he at last reached home. Grief at this loss brought him, as it always brings strong men, closer to Christ.

ing creature, which the waters bring forth, according to their kinds, and every winged fowl according to its kind. And God saw that it was good.

And God said: Let the earth bring forth the living creature in its kind, cattle and creeping things, and beasts of the earth according to their kinds. And it was so done.

And God made the beasts of the earth according to their kinds and cattle and everything that creepeth on the earth after its kind. And God saw that it was good.

And He said: Let us make men to our image and likeness; and let him have dominion over the fishes of the sea, and the fowls of the air, and the beasts and the whole earth, and every creeping creature that moveth upon the earth.

This grant of power by God meant to Jack Miner that the Creator intended to place in man's hands the balancing of nature "for the benefit of humanity". In his own characteristic way, he expressed himself: "As for me, I thank God for all He has made—for the raw materials He gave us with which to work; that He made us in His own likeness, after His own image, and endowed us with sufficient brains to develop those raw materials and keep on discovering and bringing within reach of all of us the blessings He created."

Jack Miner's life work is secure in the able hands of his sons, in the loyalty of his personal friends, and in the awakening interest of the widening circles who will get to know him through the pages of the books wherein he has recorded only a small part of his knowledge of bird and beast, fowl and flower. But one would miss the essential message of his purposeful life who failed to grasp its keynote which he sounded, all unwittingly, in his own homely way on one occasion: during a discussion of the ways of the Canada goose he rose and said: "I know you educated people call it nature, or instinct; and I have heard of such a variety of names for this goose-knowledge that I don't try to look up the meanings of these artificial words; for I am sure if all their meanings were boiled down, and all the man-made, artificial names were skimmed off, the real interpretation would be—GOD."

Jeroboam I was the first king of the Kingdom of Israel. 2928

Canadian Fashion

Plain and patterned corduroy goes into Gay Togs practical spring outfit. The tiny slacks have buttoned overall tops. The jacket sports a back belt—and there's a matching pom-pom beret.

Helpful Hints

If you chill candles in the refrigerator for twenty-four hours before you plan to use them, you'll find that they'll burn evenly and won't drip.

When you buy slip covers for your furniture, consider the problem of keeping them clean. Washable fabrics that can be laundered in your washing machine offer a good deal of variety, weave and color, and pre-shrunk materials save worry about shrinking when washed.

Keep your vases and flower containers scrupulously clean. Flowers will not last as long in a dirty, bacteria-laden container. Too many flowers crowded into a container will bruise the flowers and make attractive arrangements difficult.

A sprinkling of powdered sugar on a cake plate will help prevent the cake's sticking when you try to remove it.

Success comes in "cans".

: Selected Recipes :

You'll smile with pride, too, when you slice the loaf of Cinnamon Whirl Bread. The family will like it, and you'll find it a tea-time treat, with your own home-made jam or jelly.

Cinnamon Whirl Bread

Two cups milk, 1 compressed yeast cake, ½ cup lukewarm water, ½ cup melted shortening, ½ cup sugar, 2 tsp. salt, 2 eggs, well beaten, 7 cups sifted flour, ½ cup melted butter, ¼ cup sugar, 1 tsp. cinnamon.

Scald milk in double boiler. Cool until lukewarm. Crumble yeast cake into lukewarm water and stir until thoroughly dissolved. Mix ½ cup melted shortening, ½ cup sugar, salt and well beaten eggs; add dissolved yeast and stir flour and milk into yeast mixture alternately. Place dough on a well floured board and knead until smooth, adding more flour if necessary. Then place in a well greased bowl. Brush top with part

of butter which has been melted, cover and let rise in warm place until doubled in bulk or for about 2½ hours.

Remove dough to a floured board; knead lightly and divide into two parts. Pat out each portion of dough into a nine-inch square. Brush surface with melted butter.

Mix together ¼ cup sugar and the cinnamon. Sprinkle each square of dough with the mixture, then roll dough as for Jelly Roll. Pinch ends of loaf together; place each loaf in a well greased two quart heat-resistant glass loaf pan. Cover and allow to rise in a warm place until double in size (about an hour). Bake in moderate oven (325 degrees F.) for about 50 minutes.

GARDEN NOTES

Grower Should Forget Bulky Vegetables When Plot Is Small

Making Every Foot Count

Even a plot 10 feet by 20 will give big returns in vegetables with a little planning and double cropping. In these small plots one is wise to forget those bulky or spreading sort of things like potatoes, corn, squash or peas. One should concentrate on beans, carrots, beets, spinach, radish, lettuce, possibly a half-dozen staked tomatoes and perhaps a hill or two of cucumbers trained over the boundary fence. None of these vegetables take up much room. Beans, beets and carrots can be grown in rows only a foot apart, though an inch or so wider will make cultivation easier, and 10 feet of any of them will produce many meals for the average family. With some of the very early things like lettuce, radish and spinach double cropping can be practised. Plant these in rows, say 18 inches apart, with rows of the later things—beets, beans, carrots, parsnips, etc., in between. By the time the latter require full room the other quick-maturing items will be out of the way. It is also possible to have two crops in one season, where such quick-growers as radish are followed in the same ground by late beets, carrots or beans.

Paths And Driveways

Where the layout is of fair size and the traffic light most gardeners find that good healthy grass will stand a fair amount of wear even from an occasional car. In many of the big parks and the grounds of the Experimental Farms the flower beds are separated by 6 to 12 feet of well-kept grass and there are few bare spots. But for connecting the front door with the street or the back door with the vegetable garden, traffic is too heavy and some other material will have to be provided. Depending upon availability one can use flag stones, bricks, gravel, crushed cinders or some of the patent materials which when rolled down are like the blacktop of the surfaced highway. From the gardening standpoint the point to keep in mind is that these must be built so as to interfere as little as possible with grass cutting. Where properly laid and graded one should be able to run a mower right over them, and save a lot of hand-cutting.

Keep Them Healthy

The best protection against insects and disease is a healthy garden, grown from good disease-resistant seed, well cultivated and free from weeds. Bugs usually lurk in weed growth waiting until the garden stuff is big enough for a raid. For those

bugs that eat holes in the foliage use poison. For those that suck out the juices and make the plant wither use a spray that will burn. Disease usually hits the plant cells and causes withering or rot in blackish spots. Chemicals like sulphur are used in this case. Often one good treatment will be enough, but with things like leaf hoppers and potato bugs which lay eggs, two or three successive treatments to get the young ones will be needed. Most chemicals lose their potency in time so a fresh supply each season is advisable.

Patterns

Thrifty Pattern

7139 Alice Brooks

Less than ONE YARD for an adorable sunsuit! Plus a little snip of fabric for the gay animal bibs. Easy to sew, embroider.

Quick Canadian Quiz

- Which is Canada's fourth largest city?
- Are most Canadians under or over 30 years of age?
- How much of Canada's total area is considered suitable for agriculture?
- Canadian labor's 1945 income was \$5 billion; what was it in 1950?
- How much did Canadians pay in direct taxation in 1950?

ANSWERS: 3. 16 per cent. 2. More than half are under 30. 5. More than \$3 billion. 1. Winnipeg, Man. 4. \$8 billion.

(Material supplied by the editors of Quick Canadian Facts, the handbook of facts about Canada.)

SMILE OF THE WEEK

DOUBLE INDEMNITY

Young Bride: "Now, dearie, what will I get if I cook a dinner like that for you every day this year?"

Husband: "My life insurance."

CONTAINS VITAMINS

The liquid part of canned vegetables generally contains one-third of the water-soluble vitamins such as vitamin C and vitamins B1 and B2, as well as one-third of the minerals. Use the liquid in cream sauces, gravies and soups.

To Live Well — Eat Well

OUR COMPLETE SHORT STORY—

DUEL AT DAWN

There Was Too Much
Happiness Ahead With
Mary If He Could Win.

By HAROLD EDWARDS

THE grass, squashing beneath Tom's feet, was still damp with dew which the sun would soon dry. Realizing that he would probably never see that sun rise, unconsciously his shoulders shrugged away the faint hope which continued to cling in the back of his mind. If this duel had only been with swords...

One!
The number, called by a second from the deep shadows of an oak grove, echoed through his mind. His foot shoved automatically forward. If he could concentrate on the counting, he might still beat Andre at this cruel game. When ten was called, if he could swing about and shoot simultaneously...

Andre, he remembered, was a veteran of many duels.

Two!
How had it begun, this farce out of the past which couldn't happen in 1948 Paris? The events of the past twenty-four hours still refused to fall into any orderly pattern. There was Mary... He had gone to meet her in the Garden... When he arrived, Andre was with her... his arm carelessly drooped over the back of the stone bench, lazy fingers drumming a sly tune on her arm...

Three!
There was a look of relief on her face at his approach. And Andre's frown, he rose and bowed ceremoniously, was revealing.

"Mademoiselle has been kind," Andre's voice was silky. "She permits me to bask in the sunshine of her presence."

But Mary's eyes and the tremble in her voice contradicted the Frenchman. "Let's go, Tom," she said. "I want to see the goldfish."

Four!
If he had only walked away with Mary, the whole episode would have ended without incident. But recalling other times Andre had tried to steal Mary from him, Tom let his Irish temper overlook the duelling record which all Paris mentioned in guarded whispers. With fists doubled and chin jutting forward, he bridled toward Andre.

"After this, keep your dirty hands where they belong," he grunted between his teeth.

Five!
He remembered Andre's laugh, the deliberate carelessness of the Frenchman's actions as he leaned forward, hands on hips, daring the young American to do anything about it.

"Does Monsieur think he could make Andre obey?"

The words were followed by an explosive sting of fingers against Tom's cheek.

Six!
He could still have left, with Andre victorious in a battle which wouldn't really matter once he and Mary were back in America. Andre was reputed the best shot in Paris.

But he knew, crystal clear, that he couldn't back down. Not with Mary looking on!

Seven!
Funny how he kept remembering the things that happened next... like how he fumbled in his pocket for Mary's compact and its mirror to see the disgrace he could feel on his cheek. And the way he had snapped the compact shut and thrust it in his breast pocket once he had seen the red welt.

But he couldn't remember hitting

Discovers Home Skin Remedy

This clean stainless antiseptic known all over Canada as Moore's Emerald Oil, is such a fine healing agent that Eczema, Barber's Itch, Salt Rheum, Itching Toes and Feet, and other inflammatory skin eruptions are often relieved in a few days. Moore's Emerald Oil is pleasant to use and it is so antiseptic and penetrating that many old stubborn cases of long standing have yielded to its influence. Moore's Emerald Oil is sold by druggists everywhere to help rid you of stubborn pimples and unsightly skin troubles—satisfaction or money back.

Canadian Industrialist

Praises People Of Britain For Their Patriotism

A pat on the back, a warning, and advice for the future were the triple themes of a speech delivered in Britain recently by James S. Duncan, CMG, chairman of the Dollar-Sterling Advisory Council and chairman and president of Massey-Harris Company, Limited.

The pat on the back, from a prominent Canadian to the people of the United Kingdom, was for that country's dramatic financial recovery.

The warning was: "The job is by no means done."

The advice was: "Keep up the good work!"

Single theme of the speech, made at Eastbourne, England, concerned the necessity for Britain to build up its dollar reserve in order to be able to purchase the raw materials she must have from the Commonwealth countries, including Canada.

Mr. Duncan said: "Your penetration of the North American markets over the past two years is one of the finest examples I know of the response of a people to a patriotic appeal."

"Yet, it would be a grave error to conclude that this transference of a part of your trading activities from the lucrative and demanding sterling area to the dollar area was solely an act of self-aggregation. On the contrary, it was a combination of patriotism and enlightened self-interest."

"Most British industrialists who entered the exacting American markets in 1949 had three things in mind," said Mr. Duncan.

... To help their country in its greatest hour of need.

... To reap the rich reward which success in those markets would inevitably bring.

... To help sharpen their merchandising faculties against the harsh grind-stone of North American competitive conditions.

A manufacturer of farm implements for more than 40 years, Mr. Duncan spoke with authority on the value of always storming the most formidable citadel, of never lapsing into the moribundity and decay which inevitably descend upon an industry when the challenge of competition has gone out of it.

He said Britain's financial recovery had astonished the world, but he reminded that part of that recovery was based upon fortuitous circumstances, many of which were connected with Korea.

"I want to emphasize that the job is by no means done," Mr. Duncan declared. "A recovery based to any considerable extent on the vagaries of world raw material demand and the capricious movements of capital, is not built on a solid enough foundation."

"Only by aggressive penetration in the field of finished consumer and producer goods, efficiently marketed by permanent merchandising organizations, can a lasting effect be obtained. We must both press on—you to your task of adapting North American techniques of merchandising to your export products, we to maintenance of goodwill toward your goods to facilitate their acceptance in Canada and so ensure, in return, a long-term outlet for our own primary products."
